AUTHOR: Sergeyev, A. S.

TITLE: The chord method

PERIODICAL: Sibirskiy matematicheskiy zhurnal, v. 2, no. 2, 1961, 282-289

TEXT: The author considers a nonlinear functional equation:  $P(x) = 0$ .  $P(x)$  is supposed to be an abstract continuous function which effects a linear map of the Banach space  $X$  on the Banach space  $Y$ . Besides, the existence of abstract functions  $P(x_1, x_0)$ ,  $P(x_2, x_1, x_0)$  is assumed which map the spaces  $X \times X$  and  $X \times X \times X$  on the subspaces  $(X \rightarrow Y)$  and  $[X \rightarrow (X \rightarrow Y)]$  of  $Y$ , respectively, and satisfy the conditions:  $P(x_1, x_0)(x_1 - x_0) = P(x_1) - P(x_0)$  and  $P(x_2, x_1, x_0)(x_2 - x_1) = P(x_2, x_0) - P(x_1, x_0)$ , respectively. For the solution of the equation  $P(x) = 0$  the author uses the iterative method (chord method), starting from two approximation solutions  $x_0$  and  $x'_0$ :  $x_{n+1} = x_n - [P(x_n, x_{n-1})]^{-1}P(x_n)$ . He proves the following ✓

Card 1/2

The chord method

S/199/61/002/002/004/004  
B112/B229

Theorem 1: If  $\Gamma_0 = [P(x'_0, x_0)]^{-1}$  exists and satisfies the conditions:  
 $\|\Gamma_0\| \leq B_0$ ,  $\|\Gamma_0 P(x'_0)\| \leq \eta_0$ ,  $\|\Gamma_0 P(x'_0)\| \leq \eta'_0$  ( $\eta_0 \leq \eta'_0$ ); if furthermore  
 $\|P(u, v, z)\| \leq K$  is valid on the sphere  $\|x - x_0\| \leq 2\eta'_0$ , and the constants  
 $B_0$ ,  $\eta_0$ ,  $\eta'_0$ ,  $K$  satisfy the inequality:  $h_0 = B_0(\eta_0 + \eta'_0)K < 1/4$ , the  
equation  $P(x) = 0$  has one solution  $x^*$  toward which the approximations  $x_n$   
converge with the accuracy:  $\|x_n - x^*\| \leq \frac{1}{s_{n-1}} \cdot q^{\frac{s_{n-1}}{s_n}} (4h_0)^{\frac{s_n}{s_{n-1}}} \eta_0$ .

In pursuance of this the author proves the uniqueness of the solution  $x^*$ :  
Theorem 2: On the assumptions of theorem 1 the equation:  $P(x) = 0$   
has exactly one solution. L. V. Kantorovich is mentioned. There are  
3 Soviet-bloc references.

AUTHOR: Sergeyev, A. S.

TITLE: On the convergence of some variants of the chord method in normed spaces

CITED SOURCE: Sb. nauchn. tr. Permsk. politekhn. in-t, no. 13, 1963, 43-54

TOPIC TAGS: convergence, chord method, normed space, chord method variant, Cauchy equation, functional equation, nonlinear algebraic equation

TRANSLATION: This is a continuation of earlier studies by the author (RZHMat., 1961, 12V289) on application of the chord method for the approximation of the solution of nonlinear functional equations. The theorem presented earlier by the author on the convergence of the method is proved for some less rigid conditions. A new theorem on convergence is obtained for conditions of the Cauchy type. One variant of the chord method proposed by I. M. Derendyaev (RZHMat., 1959,

Card 1/2

3

various sizes made of various materials. New operating modes for a two-cycle d-c output magnetic amplifier are proposed for increasing the amplification factor. An engineering method for designing amplifiers is given, as well as a numerical example.

V. D. Kravchenko, 14 June, "Antenna method for determining corona losses on active (loaded) power transmission lines"; Prof. E. A. Meyerovich and Dr. Tech. Sci, Prof. D. V. Rezevig.

A theoretical basis is given for the antenna method for calculating the scale factors of an electrical circuit and for the experimental testing of the method. Measurements are made and errors analyzed on 400 and 500 kv lines.

A. D. Romanov, 14 June, "Industrial methods for erecting 110 to 500 kv electrical transmission lines"; Prof. V. V. Burgsdorf and Doc. B. A. Knyazevskiy.

Use of prefabricated reinforced concrete structures, pile foundations, and zinc coated metal structures are examined, as well as use of helicopters, welding, and special construction techniques. Economic factors are analyzed.

N. V. Chernobrovov, 21 June, "Relay protection"; Prof. A. D. Drozdov and Doc. M. I. Tsarev.

Card 2/13

L 21013-65

ACCESSION NR: 5004055

A widely used textbook recommended by the Higher Educational Institutions.

L. N. Safonov, 21 July, "Investigation of precision angle sensors with printed end coils"; Prof. Yu. M. Pul'yer and Dr. Tech. Sci. Prof. I. Ts. Gal'perin.

A general theory is developed for the output emf of multipole rotatable transformers with printed end coils made of insulating and ferromagnetic materials. The optimum number of pole pairs is determined. A theory is advanced for the integral effect in multipole angle sensors having sectional secondaries. A model "shaft-to-angle" converter has been built and tested.

All-Union Electrotechnical Institute im. Lenin

V. A. Volkov, 28 June, "Use of micaceous materials in high-voltage electrical motors"; Prof. B. M. Tareyev and Doc. S. A. Yamanov.

Basic structural principles are formulated for micaceous winding insulations in high-voltage electrical motors. Micaceous insulation based on epoxy-polyester lacquer PE-939 and combined insulation made of micaceous ribbon and organosilicon lacquer K-43a and rubberized glass fiber RSLK-1, which completely eliminate sheet mica from high-voltage motors.

M. A. Golubenko, 28 June, "Investigation of organosilicon potting

L 21013-65

ACCESSION NR: 5004055  
compounds and their reaction with organic compounds"; Prof. N. S. Leznov  
and Doc. S. A. Golubev.

Study of the synthesis of new organosilicon potting compounds and  
oligomers with functional groups in the organic radicals and primarily  
oligomers containing functional groups with epoxide groups. A potting  
compound EK-20 having good characteristics has been developed.

L. Z. Eydel', 1 October, "Investigation and development of instru-  
ments for measuring residual currents in high-voltage switching gear";  
Prof. N. E. Lysov and A. M. Bronshteyn.

Two instruments have been developed: one using a low ohmic shunt, a  
limiter, and an amplifier, for circuits having at least one ground point;  
the other using a magnetron, for circuits lacking a ground point.

E. I. Ioffe, 27 May, "Investigation of corrosion of steel pipe by  
alternating eddy currents"; V. V. Gerasimov and Cand. Chem. Sci. A. F.  
Marchenko.

Investigation of corrosion of carbon steel under conditions of soil  
electrolytes and alternating currents of varying density and frequency.  
Theoretical conclusions are advanced for increasing the lifetime of under-  
ground pipes.

All-Union Scientific-Research Institute of Electromechanics

L. V. Maziya, 30 May, "Computer simulation and investigation of con-

L 21013-65

ACCESSION NR: AP5004055

tinuous operation of the electrical propeller drive of the atomic ice-breaker 'Lenin'; N. M. Yakimenko and Doc. G. K. Krug.

A computer method has been developed for simulating the processes occurring in the electric propeller drive in operating, emergency, and adjustment modes. Recommendations are made for designing and adjusting electric drive systems.

Moscow Aviation Technological Institute

N. M. Tarasov, 20 May, "Investigations of resistance welding conditions of thin metal by the similitude method"; D. S. Balkovets and B. B. Zolotarev.

A method has been developed for calculating metal welding conditions based on a model of spot welding processes. An a-c pulse welding machine is proposed.

Leningrad Higher Marine Engineering School

V. Ya. Yagodkin, 23 May, "Investigation of the operation of electrical propulsion motors of icebreaking ships when the screw interacts with the ice"; Prof. B. I. Nornevskiy and Doc. I. I. Gritsenko.

An analytical method has been developed for determining the additional moment provided when ice passes through the propeller blades and the associated transient processes in an electrical propulsion system having direct current feedback, such as is widely used in icebreaking ships, tugs,

Card 5/13

L 21013-65

ACCESSION NR: AP5004055  
etc. A method is proposed whereby electronic computers can be used to calculate the transient processes.

60

Leningrad Mining Institute

I. M. Stolyarov, 28 June, "Investigation of magnetic semiconductor amplifiers in a system of dynamic braking of mining lifts"; Prof. A. E. Trop and Doc. V. I. Bocharov.

New magnetic amplifier designs and circuits are proposed, and physical processes in them are described. Input-output characteristic equations are given. The amplifiers can be used in various automatic control applications in mining machines.

Leningrad Polytechnical Institute

R. R. Parts /ts not yet/, 15 March, "Theoretical and experimental investigation of an asynchronous motor with various current distributions in the secondary"; Prof. L. P. Gnedin and V. M. Yurinov.

Special types of asynchronous motors, with complex rotors, are treated: ferromagnetic rotors, ferromagnetic copper-plated rotors, rotors with triple squirrel cages, short-circuited shielded rotors of any type, etc.

Leningrad Electrotechnical Institute

A. D. Shustov, 21 June, "Quality and accuracy of speed control systems of automated electric drive sections of paper making machines"; Prof. A. V. Basharin and I. E. V'yukov.

Card 6/13

L 21013-65

ACCESSION NR: AP5004055

Rheological properties of paper are systematized and fitted to the requirements of the automatic speed control system of the sections. The propagation of deformation in the paper web during sharp load variations is investigated. Accuracy and quality requirements of the control system are determined. Control systems with electromechanical and electronic amplifiers are studied.

M. A. Kropotkin, 21 June, "Investigation of the reflectivity of diffusive scattering materials in the 0.7 to 200 micron wavelength range"; Dr. of Physical and Mathematical Sciences, Prof. S. F. Rodionov and Candidate of Physical and Mathematical Sciences N. G. Yaroslavskiy.

Fundamental methods of measuring the spectral reflectivity and diffusive scattering of materials are examined and compared. A new coating has been prepared of glue BF-2 and soot which is more absorbent of 200 micron waves than soot and is more practical to use. An instrument has been designed to take spectra of the diffuse reflections from solid and granular materials in the 400 micron range. Spectral and integral coefficients of radiation from the samples are calculated. The instrument can also be used to study liquids.

Kiev Polytechnical Institute

tics of suspension insulators of tempered alkali glass"; Prof. I. K. Fedchenko and Doc. L. V. Svechnikov.

Data obtained by the author on the electrical parameters of tempered alkali glass and the properties of insulators made of it are analyzed.

G. F. Semenov, 10 June, "Investigation of electromagnetic properties of cavities with dielectric inserts"; V. S. Lukoshkov and G. N. Rapoport.

Resonators with dielectric inserts of regular but arbitrary form are calculated as well as waveguides with dielectrics. Approximate calculations are given of the dispersion characteristics and coupling impedance of spiral delay systems with dielectrical mountings.

Yu. V. Shcherbina, 24 June, "Calculation of the optimum distribution of reactive power in electrical networks of power systems with the aid of electronic digital computers"; G. E. Pukhov and Dr. of Tech. Sci. Prof. I. I. Greben'.

An integration algorithm is developed for calculating the regimes of electrical networks for given loads on the basis of divided circuits. Various computer methods are compared. The mathematical formulation of the optimum reactive power distribution is given and an iteration method of solving the problem is proposed which allows an exact accounting of the electrical inhomogeneity of the network, the effect of voltage levels on power losses, etc.

Khar'kov Polytechnical Institute

V. Ya. Elknis, 6 June, "Three-stage electromagnetic amplifier for a high-power longitudinal field with a distributed compensation winding"; Prof. A. Ya. Berger and Doc. V. T. Logvinov.

The effect of the type of compensation winding on the characteristic and parameters of the winding are investigated. Commutation features of three-stage amplifiers with various compensation windings are examined. A method is developed for calculating two circuit variations of the auxiliary pole windings. The reaction of the commutation currents is studied and an analysis is given of the calculation of the auxiliary pole windings for various methods of compensating for the armature reaction. Experimental data are reported for the amplifier with a 100 kw field and recommendations are given for building such an amplifier and choosing its parameters.

A. N. Tkachenko, 6 June, "Induction symmetrical pulse generators"; Prof. V. A. Taft and Doc. I. I. Baru.

Known types of electromechanical pulse generators designed for powering electropulse machine tools are described and classified, and their operation is analyzed in detail. Steady-state operation of the generators with linear load is investigated. Methods of calculating the erosion shape

Card 9/13

Title : Removal of Surface Moisture from Seed Grain.

Orig Pub : Vestn. s.-khi. nauchki, 1957, N° 7, 95-105

Abstract : This study concerns the method of removal of moisture after sorting the grain according to its specific weight in a liquid by drying it at different temperatures and pressures in the air drying chamber, and also by filtration method in a filtrating centrifuge. The second method proved to be the best. The article cites mathematical formulas for the determination of the centrifuging time for grains of different cultures. It also presents curves expressing the relation of moisture removal to a number of conditions (thickness of the grain layer etc.).

TITLE: On the Future Needs of Crude Petroleum Products in the National Economy of the USSR. (Ob udovletvorenii perspektivnoi potrebnosti narodnogo khozyaystva SSSR v nefteproduktakh).

PERIODICAL: Khimiya i Tekhnologiya Topliv i Masel, 1958, Nr.2. pp.1-7.  
(USSR).

ABSTRACT: The figures of consumption of petroleum products increased by 92% between 1950 - 1955. The sharpest increase was in the consumption of diesel oils ( $3\frac{1}{2}$  times higher than in 1950). The TSNIITENeft! is carrying out surveys, and estimating the requirements in crude petroleum products for 1965. A threefold increase in consumption is expected compared to 1955, and a five-fold increase as compared to 1950 (Table 1). Considerably more will be needed in the eastern parts of the USSR by 1965 (Table 2). Comparative data on the requirements of the USSR, the U.S.A., and Western Europe are given. The processing and desulphurisation of diesel oils prepared from sulphur-containing crude oil will have to be increased. The manufacture of winter grade, and other special types of diesel oil should be

TITLE: On the evaluation of the incombustibility of rubbers

SOURCE: IVUZ. Khimiya i khimicheskaya tekhnologiya, v. 9, no. 2, 1966, 322-324

TOPIC TAGS: combustion, rubber

ABSTRACT: The incombustibility of several rubber compositions was evaluated by studying the dependence of the combustibility (in terms of the extinction time in seconds) on the time during which the specimen remained in the flame. The five compositions studied were: (1) composition A (pts. by wt.): nairit, 100; MgO 10; ZnO, 5; chlorinated paraffin, 5.5; chalk, 5; (2) composition B = composition A + 5.0 pts. by wt. of aluminum hydroxide; (3) composition C = composition A + 20 pts. by wt. of aluminum hydroxide; (4) composition D = composition A + 40 pts. by wt. of aluminum hydroxide; (5) composition E = composition A + 40 pts. by wt. of nickel sulfate crystal hydrate. The corresponding curves are shown in Fig. 1. On each curve,

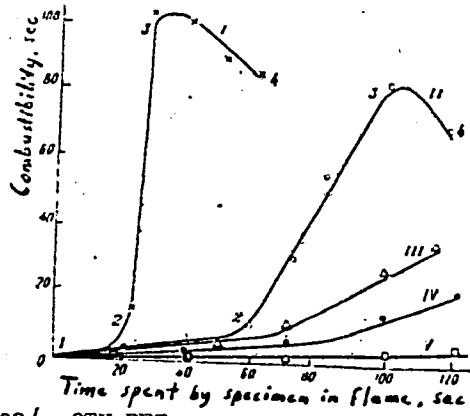

Card 1/2

UDC: 678.014

ACC NR: AP6021975

segment 1-2 is the induction period of incombustibility, segment 2-3 characterizes stable combustion, and segment 3-4 shows the decrease of combustion due to the burning up of the rubber. The curves show that the time of self-extinction of the specimen after the latter has remained in the flame for a certain period of time cannot be a criterion for an objective evaluation of incombustibility. Such a criterion is the induction period of incombustibility, i. e., the time required for self-extinction to be reached or for stable combustion to begin after the flame has ceased to act. Orig. art. has: 1 figure.

Fig. 1. Change in the combustibility of nairit rubbers as a function of the time spent by the specimens in the flame. I, II, III, IV, V - respectively rubbers of compositions A, B, C, D, and E.

TITLE: Barometric coefficient of the neutron component

PERIODICAL: Referativnyy zhurnal, Fizika, no. 10, 1962, 61, abstract 10B457  
(In collection: "Kosmicheskiye luchi, no. 3", Moscow, AN SSSR,  
1961, 163 - 165, summary in English)

TEXT: The present data concerning the seasonal change of the barometric coefficient  $\beta$  of the neutron component were obtained from observations at two (1 and 2) spaced points under similar conditions of the recording of neutron component variations. If the recording points are on close geomagnetic latitudes, the barometric coefficients  $\beta_1$  and  $\beta_2$  are equal ( $\beta_1 = \beta_2 = \beta$ ), and the temperature effect can be neglected, then  $\ln I_1 - \ln I_2 = \beta(h_2 - h_1)$ , where  $I$  and  $h$  denote the intensity and the pressure at the points indicated. The recording of the neutron component variations was conducted with standard neutron monitors at two stations: Irkutsk (USSR,  $\xi = 10^{\circ} 8'$ ;  $\lambda = 174^{\circ} 4'$ ; altitude 433 m) and Deep River (Canada,  $\xi = 57^{\circ} 5'$ ;  $\lambda = 358'$ ; altitude 145 m).  $\beta$  was calculated using all available daily averages of intensities  $\ln I_1$  and  $\ln I_2$  and pressures  $h_1$  and  $h_2$

TOPIC TAGS: neutron detector, neutron counter, electronic circuit, circuit design

ABSTRACT: A method for simplifying the circuit of a neutron monitor is proposed, which is based on the experimental finding that an increase of the supply voltage of an SNM-8 slow-neutron counter to 3000 v does not cause the counter indications to fall outside the proportionality limits. This mode of operation makes it possible to obtain a pulse amplitude roughly twice that of the standard mode. Pulses can be recorded with a simple pulse amplifier with a gain  $K \approx 200$ . Based on these results, a neutron-monitor circuit is designed which incorporates both electronic tubes and semiconductors, and by introducing feedback and adequate

correlation between the stages of the first and second amplifier, greatly reduces the thermal instability exhibited by earlier devices of this type. A distinctive feature of the circuit proposed is the use of a tunnel diode (with an operating threshold of 0.2 v) in the integral pulse-discriminator circuit. The maximum gain is 500, and the instability is  $\pm 0.5\%$ . A schematic circuit and a block diagram of the neutron monitor are given and discussed. Orig. art. has: 1 table and 4 figures.

TITLE: Investigation of load characteristics of silicon power diodes 25

SOURCE: Elektrotehnika, no. 6, 1966, 4-8

TOPIC TAGS: silicon diode, electronic rectifier/VK-200 silicon diode, PVK-200  
silicon diode

ABSTRACT: Data are presented from an investigation of the overload characteristics of silicon power diodes VK-200, VKD-200 and PVK-200, and their parameters are compared. Practical recommendations are given for reduction of the number of semiconductor diodes in rectifiers of electric trains. In the diodes tested, increasing short circuit current caused a non-linear increase in p-n junction temperature depending on the preliminary heating of the junction. The body temperatures of the three types of diodes tested under the same operating conditions differed very little. The internal thermal resistance of the PVK-200 was found to be about 1.5 times that of the other two types. It was decided that protection of the rectifier of the ER-9 electric locomotive could be simplified, since the requirements for overload capacity of silicon diodes is satisfied in conjunction with a high-voltage air-gap circuit breaker plus current-limiting reactor.
